Course

PMGM7006

Innovation and International Strategy

Instructor

Yanbo Wang

KK Leung #11-07

yanbo.wang@hku.hk

pmgm7006@gmail.com

Office Hours: Wed 9:30-12:30

Overview

This course aims to equip students with a strong conceptual foundation for understanding the dynamic process of value creation, delivery and capture for firms in the context of a re-globalized world. Students will be introduced to the importance of technological innovation as a driver for value creation and economic growth. The complex dynamics of technological evolution and geopolitical tensions will be jointly examined. PMGM7006 is theory- and research-based but practice-oriented. The majority of class time will be devoted to case discussions of companies that seek to build strong market positions for their innovations, firms with successful (and unsuccessful) technology strategies, companies that must formulate strategy in rapidly changing and highly uncertain market contexts, and enterprises whose market positions are severely challenged by external technological developments.

The conceptual readings for the course are drawn for the most part from academic journals in the fields of strategic management, the management of technology and innovation, organization theory, economics, and sociology. All case discussions will be informed by the theoretical perspectives and empirical regularities that are presented in the supporting material. Students should be warned in advance that some of the readings in the course packet are technical. Through these discussions, the dynamics of technological change will be analyzed, including concepts such as technology life-cycles, dominant design, complementary assets, and first-mover advantage. The key technology commercialization processes through which an innovative idea is transformed into a successful product or service in the marketplace will be studied, and the key organizational/management factors and socio-economic/competitive environmental factors that influence the effectiveness of these processes will be highlighted.

I do expect the course to be involved. The course develops frameworks for understanding strategic issues confronted by firms in technology-intensive industries. The focus in the course will always be on strategic issues rather than on lengthy descriptions of complex technologies. However, because it will be important to gain a basic understanding of the technologies that we cover, you are likely to find that the cases for this course must be read *closely* to understand them well. The cases are situated in a wide range of industries, including automobiles, biotechnology, microelectronics, consumer electronics, software, and artificial intelligence. I do not assume that you possess the specific technical background; you will not require one to master the course material. Regardless, the inherent complexity of many of the industries that we will study demands a careful reading of the cases in the packet to understand the business issues that they raise.

Content

The course will document the distinctive dynamics of high-technology industries and provide an understanding of how firms can seize upon the opportunities and mitigate the risks associated with these dynamics, especially in emerging markets and a re-globalized world.

PMGM7006 is largely split into two halves. The first half covers basic theoretical concepts of understanding technology-based businesses. The second then dives into discussions and applications to specific innovation types. We take a comparative perspective in case analyses, investigating technological/business dynamics across different institutional environments and stages of market development.

The following topics will be covered, especially in the context of globalization and cross-border business activities.

- Conceptual understanding of Technological Management
 - Patterns of technological evolution (S-curves)
 - Types of Innovation
 - Profiting from Technology
 - Adoption and Diffusion of Innovation
 - Standards and Design Dominance
- Practices of Innovation
 - Opportunity identification and exploration
 - Opportunity exploitation and growth hacking
- Innovation Settings, Challenges
 - Process Innovation
 - Network, Market Place, and Platform
 - International Arbitrage
 - Innovation in Emerging Markets
 - Community-based innovation

Materials

Cases and academic articles will be made available through the MOODLE system. There is no required textbook for the course. Students who are keen to use a textbook can check out the books listed in the recommended reading list.

Assessment

Grading Breakdown

Personal business plan	5%
Class participation	20%
In-class examinations	10%
Case analyses	15%
Final project	
Final presentation	25%
Final report	25%

* Grading standards are listed at the end of the syllabus

Personal Business Plan (5%)

Each person is responsible for writing a personal business plan (5 pages maximum, 1-inch margins, double spaced, and 12-point font). The purpose of this assignment is to help you reflect on your personal and professional development by creating a comprehensive business plan for your career. This plan will focus on your strengths, weaknesses, career aspirations, and key success factors over the next 5 and 10 years. The deadline for the assignment is 9AM of March 27, 2026. More detailed instruction will be handed out in the class.

Class Participation (20%)

This is a case-based course. To be prepared for class, you must read and think about assignments in advance of class. Evaluation of your participation will be based on your attendance, and your ability to contribute comments that are insightful, relevant and progressive (i.e., comments that move the discussion forward, rather than restate what has already been said). I will be looking for quality in your participation and you will not need significant “airtime” to earn a high participation grade (if you put forth a single, key insight and that is all you contribute to a session, you will receive the maximum class participation grade for that session).

To aid you in preparing for class discussion, I will distribute key questions for each case that will foreshadow the direction of the in-class discussions. **Please come to every class prepared to discuss the case at hand. Cold calls will be exercised.**

As a significant proportion of the grade is tied to class participation; it is important that you attend all class sessions. Missing class will affect your grade and more importantly your own and your classmates' experience in the class. Attendance will be recorded. Absences will only be excused for valid reasons such as being certified medically unfit by a doctor, having experienced a death in the immediate family, or being involved in a serious accident (note that this does not include sports trainings, cultural events, etc.). If you are absent for a valid reason, please email the instructor in advance of the course meeting and provide documentary evidence in the subsequent class. Failure to attend class will result in a negative class participation score for that class.

Please note that class participation in a given session counts for a maximum of 3% of the final grade. One shall actively participate in class discussions throughout the module.

In-class examinations (10%)

Two closed-book, closed-note, on-paper examination. Clear and effective writing is essential. Closely related to content covered in the class.

Case Analyses (15%)

Each person is responsible for writing up *two* case analyses (*3 pages maximum, 1-inch margins, double spaced and 12-point font*). Each case will contribute 10% to the final grade. These write-ups will be responses to questions that I will distribute in advance of each week's readings. You are free to discuss and work with groups of any size, however all final submissions should be prepared independently. *If you choose to work in groups, acknowledge all group members involved in the case discussion.*

Students are required to choose **two** out of the following four cases for this assignment –

1. EMI CT Scanner (Session 2)
2. Tesla (Session 3)
3. Aravind (Session 5)
4. Google Glass (Session 7)

Some guidelines and expectations:

- This is NOT a case summary. Beyond a brief introduction of the company, you should avoid simply describing the case. Be analytical.
- The purpose of the case is to provide information for you to illustrate your statements and defend your points.
- Focus. Aim for depth rather than breadth.
- Write in *prose*; we expect a short essay. Articulate the main points clearly using topic sentences and make sure the writing and argumentation flows logically. No bullet lists are to be employed.
- ***The deadline for the individual essay is 9:00am of the day on which the case is discussed.***

Course Project: Company/Technology Assessment (Total: 50%)

In a group with 8-10 members, you will be asked to perform an in-depth analysis of either a company's (technology) strategy and the positioning of its products or services, or an emergent technology's strengths, limits, evolutionary trajectory and commercialization opportunities. The paper may be **up to 20 pages** in length (*1-inch margins, double spaced and 12-point font*) not including figures, financials, and other exhibits. All groups are expected to present the results of their research to the class during the final week of the class. **The final project report is due by 9:00am, May 4th, 2026.**

Firms/techs for you to choose: 1) Automatic driving, 2) flying cars, 3) EVs (e.g., Porsche, Wuling Hongguang), 4) overseas expansion of Chinese firms (e.g., Temu, Shein, BYD), 5) Copy-from-China model in South East Asia, 6) AI in X (e.g., XtalPi in drug discovery), 7) US Entity List and its implications for Chinese firms (e.g., DJI, Wuxi Pharm), 8) practical blockchain, 9) 3D printing, 10) e-

cigarette, 11) senior care industry (and anything for China to learn from Japan?), and 12) tech/product/business model innovation for China's "down-to-the-earth market". If your team is particularly interested in a firm/tech outside the scope above, please talk to the instructor.

If your team chooses to work on a firm, your paper should describe the firm's technology strategy, business models and the important strategic issues that confront the organization. Although not all of the following issues will be relevant to the situation you choose to analyze, you should identify and evaluate (some of) the following issues: the competitors of your firm, the stage of development of its industry, potential changes in the industry created by technological or market changes, sources of innovation for the industry and firm you are analyzing, your target's intellectual property position, its key competencies, the stage of development of its products, the appropriability regime it faces, its financial situation (access to capital, capital structure), and the technical and managerial staffing issues that it faces. Through your analysis, you draw conclusions about the attractiveness and sustainability of your company's position and the industry segment that it occupies. If it helps, you can assume that you are either crafting a report to submit to potential investors in the firm, or submitting an external review of its current technology strategy to the firm's board.

If your team chooses to work on a technology, your paper should describe the technology's stage of development and potential trajectories of evolution. Your team should examine the technology's strengths and limitations, functionality, potential usages and utility for targeted users, as well as its compatibility with the current infrastructure, social norms, user habits, regulations, and other economic, social, political and even psychological factors. You can also identify a leading firm embracing the technology, discuss its commercialization strategy and business model, and make proposals regarding how to improve its likelihood of achieving commercial success with the technology. Alternatively, you can write a business proposal about you and your teammates "plan" to commercialize the technology as cofounders of a startup firm.

Below please find a sampler **team project presentation** evaluation form. Do consider the evaluation criteria in choosing your company/technology.

	Team Name	Team Name
The topic captures my interests		
The team gives clear and insightful description of the technology, its strength and weakness and potential trends in evolution		
The team gives clear and insightful description of the focal firm's competitive advantage, challenges and capability/ potential to overcome these challenges		
The team is well organized and the progression of the ideas is easy to follow		
The team seems confident of personal understanding of the topic and handles questions well		
I have learned something new from the team		
Overall performance		

Here is a **peer evaluation** form that each student is expected to submit individually on May 6th.

More often than not, we work in team settings and our individual successes are greatly shaped by the joint effort made by our teammates. It is thus very important for one to join and build a team whose members are passionate about the challenge and are willing to make their best efforts to reach the collective goal. Please evaluate your teammates below. **BE FAIR TO YOUR TEAMMATES!**

Confidentiality is maintained regarding peer evaluation, and neither the professor nor the TA shall disclose this information to any third party. It is considered unprofessional to inquire about how teammates have evaluated oneself.

Team Name:	Your Name:	HKU ID:
Teammate name (Please exclude yourself)	If you get another opportunity to start over, would you like to have this individual as a teammate? A. Definitely YES B. OK to have him/her as a teammate C. Not sure if I want him/her to be on the team D. Definitely NO	Any particular comment on this teammate's efforts, dedication, and contribution?

Administration

Assignments

Please note that **late submissions will not be graded** and that **severe penalties exist for plagiarism**. If you have any questions regarding these policies, please ask the instructor in advance of potential issues.

Academic Honesty & Plagiarism

Academic integrity and honesty are essential for the pursuit and acquisition of knowledge. The University and School expect every student to uphold academic integrity & honesty at all times. Academic dishonesty is any misrepresentation with the intent to deceive, or failure to acknowledge the source, or falsification of information, or inaccuracy of statements, or cheating at examinations/tests, or inappropriate use of resources.

Plagiarism is 'the practice of taking someone else's work or ideas and passing them off as one's own' (The New Oxford Dictionary of English). The University and School will not condone plagiarism. Students should adopt this rule – You have the obligation to make clear to the assessor which is your own work, and which is the work of others. Otherwise, your assessor is entitled to assume that everything being presented for assessment is being presented as entirely your own work. This is a minimum standard. In case of any doubts, you should consult your instructor.

You are encouraged to review the University Statement on plagiarism at <http://www.hku.hk/plagiarism/>.

AI Policy

I expect you to use AI tools such as ChatGPT in this class. Mastering the use of AI is an emerging skill. A plethora of online resources are accessible to you. If you come across a resource that you find exceptionally valuable, kindly forward it to the TA via email so that the information may be disseminated amongst the class.

Be aware of the following issue of the usage of AI:

1. AI can be a powerful resource when utilized appropriately, yet it has its constraints, much like any other tool. It's important to consider when the tool is beneficial and when it is not.
2. Since AI is a tool, you are hold responsible for any mistakes or oversights it makes. Be mindful about AI's limitations and try to combine your domain knowledge, creativity, and access to trustworthy sources of information with AI to boost your efficiency.
3. Although AI is a tool, it is important to acknowledge its use. Please include a paragraph at the end of the assignment that uses AI describing what you used AI for and what prompts you used to get the results in the assignment. Failure to do so would constitute a breach of the academic honesty policy.

Schedule of Classes

Note: Subject to change

Session 1
Reading Case **Introduction**
Abernathy & Utterback, "Patterns of industrial innovation," *Technology Review*
Bicycle and tech evolution (HKU)

Class exercise Design a personal flying machine
Key Task Form your team of 8-10 members

Recommended readings
Foster, "S Curve as a forecast tool"
Pisano, "You need an innovation Strategy"

Session 2
Case **Technological Changes, Value Creation and Value Capture**
Reading "EMI and the CT Scanner (A)", Bartlett C. A., *HBS Case Series*
Teece, "Capture Value from Technological Innovation: Integration, Strategic
Partnering, and Licensing Decisions"
Video [EMI CT Scanner](#)

Study questions

1. Use Porter's Five-Forces framework to analyse the industrial structure for EMI's new product. Do think about the key success factors in the sector that EMI aimed to enter
2. After reading the case, stop and think about these questions: (1) What are the major innovations by EMI? Please try to decompose the product. (2) Should EMI enter the CT scanner business? Why or why not? (3) How attractive is this business? And, (4) Who will make the money in CT scanners and why?
3. Let's assume that you were a private equity fund manager and was presented with the opportunity to invest for 25% equity of EMI's CT Scanner business. Would you take on this opportunity? What factors should you consider in the decision-making process?

Case Analysis Please focus on question 3. To answer the question well, you need to take into considerations the answers to questions 1 & 2.

Session 3 **Typology of Innovation & Business Implications**

Reminder Everyone should have a team now

Case Tesla (**Students need to search info online**)
Reading Schelling, "Types and Patterns of Innovation", Chapter 3

Recommended readings
HBR – Tesla's Future, GM's Past
HBR- How do industry change?
Background Car anatomy: The Basics / How cars work? (3D animation)
material <https://www.youtube.com/watch?v=fPjOWekzeGI>

Study questions

In real life situations, we do not get the comfort of analysing a well-compiled “case”. Instead, we have to look for relevant information from the ocean of raw materials. Please work with your team to find information about Tesla to analyze the firm’s technology and business model. Below are some of the sampler resources of information -

[A Tesla in every garage?](#) IEEE spectrum, 2016-02, Vol.53 (2), p.34-55

https://en.wikipedia.org/wiki/Tesla,_Inc.

<https://www.nytimes.com/2012/03/04/automobiles/Tesla-Battery-Failures-Make-Bricking-a-Buzzword.html>

https://en.wikipedia.org/wiki/Automotive_industry_in_the_United_States

[Howes: Tesla hoopla embodies the disruption of Detroit](#)

[Tesla Updates Software To Improve Radar](#)

[Tesla extended the range of some Florida vehicles for drivers to escape Hurricane Irma](#)

[The Secret Tesla Motors Master Plan \(just between you and me\)](#)

<https://seekingalpha.com/article/4589277-tesla-competitive-advantages-favorable-stock-valuation>

<https://hbr.org/2020/02/how-tesla-sets-itself-apart>

<https://emag.directindustry.com/2021/09/21/who-are-the-three-main-chinese-electric-car-companies/>

<https://news.ycombinator.com/item?id=16891651>

Please work with your teammates and get ready to answer the following questions –

1. What’s the industrial structure for automobiles at the turn of the century? Which (local) firms were the last successful entrants into the market?
2. What are the major differences between an ICE (internal combustion engine) car and an EV (electric vehicles) car? Any implications for firm capability, business model and competition dynamics?
3. In comparison to conventional cars, what is a Tesla?
4. How has the financial market been responding to the Tesla story? Please trace it from the first day of IPO until today. Anything to learn from the stock price fluctuation?
5. (Bonus) How do the challenges imposed by Tesla differ from those imposed by the Japanese auto companies to Detroit’s Big Three?
6. (Bonus) To what extent do you think high-end cars such as Porch can make a successful transition into the EV sector?

Case Analysis Please focus on question 3 (please note Q3 is broader than Q2). How has Tesla been disrupting the auto industry (if at all)?

Session 4 Method of Innovation: (Re)combination

Reading Blue Ocean Strategy, Chapter 2 (value curve)
Discovering New Points of Differentiation

Recommended readings

“Nondisruptive Creation”, *HBR*

“Blue Ocean Strategy”, *HBR*

<https://www.blueoceanstrategy.com/tools/strategy-canvas/>

The elements of value, *HBR* (2016)

Study questions

1. What did the circus industry look like before Cirque du Soleil? How did Cirque du Soleil differentiate itself from the rest of the industry? Describe the key components of the Cirque du Soleil’s business model.
2. What are the potential challenges to the Blue Ocean way of innovation?
3. In the age of the digital economy, many firms have embraced the concept of “**Internet +**”. How is it different from the Blue Ocean’s (re)combination approach?

Class exercise Can you use Blue Ocean strategy to design a business for career service targeting college students and/or graduate school students like yourselves?

Session 5 **Method of Innovation: Analogy
(Process and Business Model Innovation)**

Case Prahalad, C.K., “The Aravind Eye Care System: Delivering the Most Precious Gift”, in *Fortune at the Bottom of the Pyramid*

Reading How Strategists Really Think: Tapping the Power of Analogy, *HBR*

Recommended readings

Eisenmann, T. “Business Model Analysis for Entrepreneurs”, *HBS*
Alexander Osterwalder: Tools for Business Model Generation (Video)
<https://www.youtube.com/watch?v=8GIbCg8NpBw>

Study questions

1. Identify the key factors that have led to Aravind’s success. What is the innovation here?
2. Please draw a picture of the business model for AEH
3. What have been the roles of the clinical and support staff? Are they all dedicated and altruistic, or do they have an ulterior motive?
4. How would you link the AEH’s innovation to Blue Ocean Strategy?
5. Are there any weaknesses with the Aravind model? How would the organization expand and grow? Imagine the following scenario – The Gates Foundation was deeply impressed by the AEH and would like to offer a donation of \$100million so that the hospital could expand as quickly as possible, i.e. establishing 5 new hospitals in the next two years. What do you think about the offer?
6. Do you think the AEH model, or at least some components of it, can be replicated in more complex medical areas, such as cancer treatment? Do you think it can be expanded to the domain of fine arts, such as oil painting?

Case Analysis Please focus on Question 5. In order to answer the question well, you need to examine the key factors underneath Aravind’s success and think about to what extent they can be scalable.

Class Exercise One typical pitch from entrepreneurs is that “we are building the X (an extremely famous company that everyone wants to have a slice of the pie) of Y (a particular industry)”. Please analyse why “the Uber for bicycle (or short-distance transportation)” has mainly failed in China and elsewhere?

Session 6 **Method of Innovation: Experimentation
(Lean Startup)**

Case Rent the Runway

Reading Chapters 4-5, *The Innovator’s Method*

Recommended readings

Steve Blank, “Why the lean start-up changes everything” (*HBR*)

Study questions

1. Create a timeline of actions undertaken by Rent the Runway’s cofounders. Do you agree with the decision to pursue each action?
2. Which actions were important in validating business model hypotheses and refining the concept? [Which hypotheses/uncertainties were the cofounders trying to test/reduce?] Can you suggest different actions that the cofounders should have taken?
3. What information did the cofounders collect through their “trunk shows”? Did they manage to collect info on consumer conversation rate? What did the numbers show?

4. What are the strengths and weaknesses of using experimentation for strategy formation/validation?
5. Please describe the key features of RTR's business model. Please list down three industries where a similar model could be applied. How about the jewellery sector?
6. Do you believe RTR's model could be successful replicated in emerging economies like China, Malaysia or Indonesia? If yes, why? If not, why not?

Session 7 Adoption and Diffusion of Technology and Innovation

Case "Google Glass"

Reading 1. Eager Sellers and Stony Buyers: The Psychology of New Product Adoption
2. The Wide Lens

Recommended readings

1. What's Your Best Innovation Bet?
2. Moore, G., "Crossing the Chasm," Chapters 1 & 2
3. The Consumer Decision Journey, McKinsey Quarterly
4. The elements of value, HBR (2016)
5. Rogers E., Chapter 7, *Diffusion of Innovations*

Study questions

1. Why did Google develop Glass? How do you think about the technology? How do you think about the product? Would you like to buy something like it? For what use? How much would you like to pay?
2. Does Google consider Glass a failure or a success? Do you consider Glass a failure or success? Assess the launch of Google Glass. What did you agree with and disagree with?
3. Suppose that you are the product manager for Google Glass 2; what would you keep and what would you change? What are the key factors that you would consider for the further development and relaunch of Glass?
4. Please name two products/innovations that you have encountered over the past years that you thought that they would take off but did not. Please describe your understanding about their failures.
5. Please name two products/innovations that you have encountered over the past years that you thought "no way that this will work" but they turned out to be successful. Please describe your thought about the original misjudgement and why the products turned out to be successful

Case analysis Please focus on Question 3. To answer this question well, you need to think about Questions 1 & 2.

Volunteer One team for a 15 minutes' presentation on Wide Lens

Session 8 Review and Team Consultation

Sessions 9 & 10 Final Project Presentation

STANDARDS FOR ASSESSMENT	
Course Grade Descriptors	
A+, A, A-	Consistently exhibits strong analytical skills and the ability to define, analyze and solve strategic problems by means of the relevant theoretical frameworks and consistently shows original thinking.
B+, B, B-	Frequently exhibits strong analytical skills and the ability to define, analyze and solve strategic problems by means of the relevant theoretical frameworks and shows some original thinking.
C+, C, C-	Only occasionally exhibits strong analytical skills and the ability to define, analyze and solve strategic problems by means of the relevant theoretical framework, showing little evidence of original thinking.
D+, D	Only occasionally exhibits basic analytical skills and the ability to define, analyze and solve strategic problems by means of the relevant theoretical frameworks and lacks original thinking.
F	Unable to define, analyze and solve strategic problems through the relevant theoretical frameworks.
Assessment Rubrics for Participation	
A+, A, A-	•Consistently participated voluntarily in case discussions and other class discussions. •All or almost all contributions to the discussion are relevant, clear, well-articulated and insightful and consist of relevant and helpful examples and analyses, creative and insightful solutions, thereby appropriately challenging assumptions and perspectives, showing an outstanding ability to apply concepts and theories to practical examples.
B+, B, B-	•Consistently participated voluntarily in case discussions and other class discussions. •Most contributions to the discussion are relevant, clear, well-articulated and insightful and consist of relevant and helpful examples and analyses, creative and insightful solutions, thereby appropriately challenging assumptions and perspectives, showing a strong ability to apply concepts and theories to practical examples.
C+, C, C-	•Occasionally participated voluntarily in case discussions and other class discussions. •Some contributions to the discussion are relevant, clear, well-articulated and insightful and consist of relevant and helpful examples and analyses, showing some creative and insightful solutions, thereby showing a moderate ability to apply concepts and theories to practical examples.
D+, D	•Occasionally participated voluntarily in case discussions and other class discussions. •Few contributions to the discussion are relevant, clear, well-articulated and insightful and consist of limited relevant and helpful examples and analyses, showing very limited creative and insightful solutions, thereby showing very limited ability to apply concepts and theories to practical examples.
F	•Failed to participate voluntarily or simply recited comments made by others.
Assessment Rubrics for Group Project	
A+, A, A-	<u>Analysis:</u> •Demonstrates an outstanding level of understanding of, and ability to apply concepts and theories to the case company chosen. •All relevant aspects about the case company were addressed and researched in sufficient depth. •Draws widely from relevant sources and cites sources correctly. <u>Writing and Structure:</u> •Logical structure of presentation deck as a whole.

	•Excellent development of arguments offering a logically consistent and well-articulated analysis and great insights into the subject. •No spelling or grammar mistakes.
B+, B, B-	<u>Analysis:</u> •Demonstrates a good level of understanding of, and ability to apply concepts and theories to the case company chosen. •Most relevant aspects about the case company were addressed and researched in sufficient depth. •Draws widely from relevant sources and cites sources correctly. <u>Writing and Structure:</u> •Logical structure of presentation deck as a whole. •Good development of arguments offering a logically consistent and well-articulated analysis and good insights into the subject. •No spelling or grammar mistakes.
C+, C, C-	<u>Analysis:</u> •Demonstrates a mediocre level of understanding of, and ability to apply concepts and theories to the case company chosen. •Some relevant aspects about the case company were addressed and researched in sufficient depth. •Some use of sources of information and correct citation of sources. <u>Writing and Structure:</u> •Logical structure of presentation deck as a whole. •Mediocre development of arguments offering some insights into the subject. •No spelling or grammar mistakes.
D+, D	<u>Analysis:</u> •Demonstrates limited level of understanding of, and ability to apply concepts and theories to the case company chosen. •Some relevant aspects about the case company were addressed and researched. •Limited use of sources of information but correct citation of sources. <u>Writing and Structure:</u> •Flaws in the logic of the structure of presentation deck as a whole. •Poor development of arguments offering limited insights into the subject. •No spelling or grammar mistakes.
F	<u>Analysis:</u> •Demonstrates a lack of understanding of, and ability to apply theory and concepts to the case company chosen. •Relevant aspects about the case company were not addressed. •Little use of sources of information and incorrect citation of sources. <u>Writing and Structure:</u>

	•Flaws in the logic of the arguments and the structure of the presentation deck. •A lack of development of arguments offering no insight into the subject. •Failure to use available software for grammar and spelling checks, resulting in poor writing, typos and grammatical errors.
Assessment Rubrics for Individual Essay	
A+, A, A-	•All or almost all of the questions are clearly and accurately answered showing outstanding insights into the theoretical material and an outstanding ability to conduct case analysis and apply concepts and theories. •All or almost all of the responses are well organized, clear, fluent, and with sufficient elaboration.
B+, B, B-	•Most of the questions are clearly and accurately answered showing good insights into the theoretical material and a good ability to conduct case analysis and apply concepts and theories. •Most of the responses are well organized, clear, fluent, and with sufficient elaboration.
C+, C, C-	•Some of the questions are clearly and accurately answered showing some insights into the theoretical material and a mediocre ability to conduct case analysis and apply concepts and theories. •Some of the responses are well organized, clear, fluent, and with sufficient elaboration.
D+, D	•Few of the questions are clearly and accurately answered showing limited insights into the theoretical material and a limited ability to conduct case analysis and apply concepts and theories. •Few of the responses are well organized, clear, fluent, and with sufficient elaboration.
F	•Very few or none of the questions are clearly and accurately answered showing few insight into the theoretical material and a lack of ability to conduct case analysis and apply concepts and theories. •Very few or none of the responses are well organized, clear, fluent, and with sufficient elaboration.
